Heights of 2100mm & 2400mm

Wire diameter of 5.00mm

Conforms to DET specification - Contract #0601006

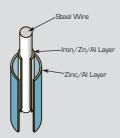

Made in Australia to the highest specifications

PROFENCE™ BOULEVARD SECURITY FENCING... A COST EFFECTIVE SECURITY SOLUTION

The Profence™ Boulevard Security Fencing System has been developed to meet the requirements of the NSW Department of Commerce - Security Fencing Contract #0601006. The mesh panel is made from 5mm wire, has a wire spacing of 50mm x 75mm, two 'V' presses and a spiked top.

The gates feature a unique drop bolt arrangement that prevents the bolt handle being used as a foot hold, whilst still allowing locking and unlocking access from both sides of the gate and can be manufactured to custom sizes.

Protective Fencing manufactures this product using Australian made Zalcote® wire. This wire has a zinc and aluminium coating that provides superior corrosion performance. The coating is comprised of a 5% aluminium and 95% zinc alloy which is applied in a process that forms two distinct layers that offer both passive and galvanic protection to the steel wire in one coating.

Azko Nobel has accredited our powder coating facility as an Interpon Metaplex Commercial Accredited Applicator which means that we can offer up to a 15 year warranty on Interpon 200 or Interpon D2015 depending on topcoat selection.

GENERAL SPECIFICATIONS

Intermediate Post - 50NB - Medium Pipe AS/NZS1074:1989

Gate Post - 100NB - Medium Pipe AS/NZS1074:1989
